PROFILE

Software Engineer with 3+ years of experience building scalable SaaS products, distributed systems, AI-powered workflows, cloud-native platforms, and developer tooling. Experienced in Java, Spring Boot, Vue.js, AWS, Kubernetes, and LLM-based applications. Proven track record of owning products end-to-end and delivering measurable business impact.

WORK EXPERIENCE

Chargebee, Software Engineer 11/2024 – present

- **Generative AI & Agentic Systems**
 - Designed and shipped an LLM-powered onboarding agent that autonomously parses and maps customer pricing structures into Chargebee's billing schema, cutting onboarding and exploration friction by 80%.
 - Built MCP (Model Context Protocol)-based tooling that exposing agent-callable tools, enabling AI agents to execute self-service customer configuration workflows end-to-end and reducing support tickets by 50%.
- **Platform Engineering**
 - Led the migration of a legacy configuration platform to a unified framework with audit logging, rule-based criteria evaluation, and resolver chains, gracefully reconciling data discrepancies across multiple downstream systems with zero customer-facing incidents.
 - Owned full-lifecycle development of an on-demand sandboxing platform on Kubernetes and AWS, supporting scalable, isolated deployments and flexible pricing models, scaling to 500+ unique monthly users.
 - Built a dynamic, rule-driven blacklist system for regulated email delivery, enforcing jurisdiction-specific compliance requirements and tightening policy enforcement across customer regions.

Chargebee, SDET 08/2022 – 10/2024

- Pioneered an automated performance testing framework using AWS Lambda, Python, and Vue.js, lowering manual QA effort by 75% and cutting test cycle times by 40%.
- Integrated automated performance validation into CI/ CD pipelines,raising release velocity from monthly to biweekly cycles.
- Orchestrated on-demand, data-driven performance dashboards using modern cloud stacks, accelerating debugging and incident response by 60%.

EDUCATION

Computer Science Engineering, B.Tech, Amrita School of Engineering 2018 – 2022
CGPA-8.63/10. Amritapuri, Kerala

SKILLS

Languages: Java, Python, TypeScript, SQL, Bash | **Frameworks:** Spring Boot, Spring Framework, JPA, Hibernate, Vue.js, REST APIs, Microservices | **AI / ML:** LLM Integration, OpenAI API, AI Agents, RAG, Prompt Engineering | **Cloud & DevOps:** AWS (ECS, Lambda, S3, RDS, CloudWatch), Docker, Kubernetes, Terraform, GitHub Actions, Git | **Databases:** MySQL, PostgreSQL, Redis | **Observability:** ELK Stack, Splunk, Grafana

PERSONAL PROJECTS

- Klaro**  , AI-powered educational platform that analyzes incorrect student responses, identifies underlying conceptual gaps, and generates personalized learning paths.
- Built an AI-powered learning platform that identifies conceptual gaps from incorrect responses and generates personalized remediation paths.
 - Designed a concept dependency graph for prerequisite analysis and root-cause identification of learning deficiencies.
 - Integrated LLM-based feedback generation, adaptive assessments, and mastery tracking to deliver personalized learning experiences.
