

Puneeth Chanda

chandapuneeth@gmail.com | linkedin.com/in/puneeth-chanda | puneeth-chanda.github.io | Hyderabad, India

PROFESSIONAL SUMMARY

Software Engineer with 3+ years building scalable SaaS products, distributed systems, and AI-powered workflows. Deep expertise in Java, Spring Boot, microservices, and REST API development. Proven track record shipping LLM agents and MCP-based tooling that cut onboarding friction by 80% and support tickets by 50%. Strong in cloud-native platforms (AWS, Kubernetes, Docker), CI/CD pipelines, and observability. Seeking to apply systems thinking and AI fluency to high-scale payment infrastructure.

CORE COMPETENCIES

Java / Spring Boot / JPA / Hibernate

Microservices & REST API Design

LLM Integration & Agentic AI

MCP / Tool-Based Workflows

Kubernetes & Docker

AWS Cloud-Native Architecture

CI/CD & DevOps Automation

System Design & Scalability

WORK EXPERIENCE

Chargebee

Nov 2024 – Present

Software Engineer Hyderabad, India

- LLM-powered onboarding agent:** Designed and shipped an autonomous agent that parses customer pricing structures and maps them into Chargebee's billing schema using LLM orchestration, cutting onboarding friction by **80%**.
- MCP-based self-service tooling:** Built Model Context Protocol tooling exposing agent-callable APIs, enabling AI agents to execute end-to-end customer configuration workflows and reducing support tickets by **50%**.
- Legacy platform migration:** Led migration of a legacy configuration platform to a unified framework with audit logging, rule-based criteria evaluation, and resolver chains, **eliminating data discrepancies** across multiple downstream systems and hardening cross-system consistency.
- Multi-site sandboxing:** Extended sandboxing framework from single-site to multi-site by decoupling sharing and coding layers, enabling independent capabilities per customer site.
- Compliance-driven rule engine:** Built a dynamic, rule-driven blacklist system for regulated email delivery, enforcing jurisdiction-specific compliance requirements across customer regions.

Chargebee

Aug 2022 – Oct 2024

SDET – Platform Engineering Hyderabad, India

- Automated performance testing framework:** Pioneered an AWS Lambda + Python + Vue.js framework, lowering manual QA effort by **75%** and cutting test cycle times by **40%**.
- CI/CD integration:** Integrated automated performance validation into CI/CD pipelines, raising release velocity from monthly to **biweekly** cycles.
- Observability dashboards:** Orchestrated on-demand, data-driven performance dashboards using cloud-native stacks, accelerating debugging and incident response by **60%**.

EDUCATION

B.Tech in Computer Science Engineering Amrita School of Engineering

2018 – 2022

CGPA: 8.63/10. Amritapuri, Kerala, India.

SKILLS

Languages: Java, Python, TypeScript, SQL, Bash Frameworks: Spring Boot, Spring MVC, JPA, Hibernate, Vue.js, REST APIs, Microservices

AI / GenAI: LLM Integration, OpenAI API, AI Agents, MCP, RAG, Prompt Engineering, GitHub Copilot

Cloud & DevOps: AWS (ECS, Lambda, S3, RDS, CloudWatch), Docker, Kubernetes, Terraform, GitHub Actions, Git

Databases: MySQL, PostgreSQL, Redis, Oracle (familiar) Observability: Splunk, ELK Stack, Grafana
