PROFESSIONAL SUMMARY

Software engineer with 3+ years building scalable SaaS products, distributed systems, and AI-powered workflows. At Chargebee, I ship production AI agents and self-service configuration tooling that reduce support dependency and onboarding friction. I work across Java, Spring Boot, Python, Kubernetes, and AWS, with hands-on experience in LLM APIs, agent orchestration, and resilient backend services.

CORE COMPETENCIES

Agentic AI Systems LLM API Integration MCP Tooling Distributed Backend Services Kubernetes & Docker Java & Spring Boot
Python REST APIs Observability & Reliability

WORK EXPERIENCE

Chargebee November 2024 - Present

Software Engineer

- **Built an onboarding agent** that maps a user's pricing structure into Chargebee, reducing onboarding and exploration friction time by 80%.
- **Developed MCP-based tooling** enabling AI agents to perform self-service customer configuration workflows, reducing support dependency by 50%.
- **Led migration** of a legacy configuration platform to a unified configuration framework supporting audits, criteria evaluation, and resolver chains with zero data discrepancies.
- **Led full lifecycle development** of an on-demand sandboxing platform, enabling scalable deployments and flexible pricing, servicing 500+ unique users monthly.
- **Built a dynamic blacklist feature** for regulated email delivery, supporting jurisdiction-specific requirements and reducing policy breaches.

Chargebee August 2022 - October 2024

SDET

- **Pioneered an automated performance testing framework** using AWS Lambda, Python, and Vue.js, lowering manual QA effort by 75% and cutting test cycle times by 40%.
- **Integrated automated performance validation** into CI/CD pipelines, raising release velocity from monthly to biweekly cycles.
- **Orchestrated on-demand, data-driven performance dashboards** using modern cloud stacks, accelerating debugging and incident response by 60%.

RECENT PERSONAL PROJECTS

Klaro

AI-powered educational platform that analyzes incorrect student responses, identifies underlying conceptual gaps, and generates personalized learning paths. Built a concept dependency graph for prerequisite analysis, integrated LLM-based feedback generation, adaptive assessments, and mastery tracking.

EDUCATION

B.Tech, Computer Science Engineering Amrita School of Engineering, Amritapuri 2018 - 2022

CGPA: 8.63/10

SKILLS

Languages: Java, Python, TypeScript, SQL **AI/ML:** LLM Integration, OpenAI API, AI Agents, RAG, Prompt Engineering, MCP
Databases: MySQL, PostgreSQL **Frameworks:** Spring Boot, Spring Framework, JPA, Hibernate, Vue.js, REST APIs, Microservices
Cloud & DevOps: AWS (ECS, Lambda, S3, RDS, CloudWatch), Docker, Kubernetes, Terraform, GitHub Actions, Git
Observability: ELK Stack, Splunk, Grafana
